About Geonix

Our mission is to develop and produce equipment to track, monitor and protect people and property anywhere in the world.

We support a wide variety of applications particularly in complex, difficult & sometimes dangerous markets such as Iraq, Afghanistan, the Sudan etc. where conventional communications are challenging and threats to goods, life and limb are everyday realities. We specialise in equipment that operates both where GSM networks are available and in the more remote areas where only satellite networks reach, both on land and at sea.

Working with our best in class partners, we are able to offer complete, end-to-end equipment and technology solutions that can be implemented both quickly and cost effectively.

What do our products allow you to do?

- Keep continuous track of your personnel, trucks, ships, cars, vans, containers and other assets
- Keep on working both in areas of GSM coverage across the globe, and via satellite where GSM coverage is not available
- Allow the user to request immediate assistance when required
- Integrate tracking, monitoring and surveillance solutions with other business applications
- Receive alarms automatically if an employee does not respond or a vehicle goes outside its defined route
- Provide cost effective lone worker protection solutions for employees who work in dangerous environments or territories

Why choose Geonix as your equipment supplier?

- Quality: we use the latest GPS chipsets, satellite and GPRS modems from such global suppliers as SiRF, Motorola, Siemens and APSI
- Versatility: our equipment is provided with a full range of accessories such as solar panels, dockers, sensors, antennae and charging systems as appropriate to the application
- Flexibility: ability to satisfy a wide variety of customer applications through the superior product design
- Cost-effective: we provide some of the best featured and lowest cost satellite and GPRS tracking systems available
- Support and advice: for your overt and covert locating, monitoring and surveillance needs from a company that is a leader in its chosen field

Key Products:

SATELLITE

Advanced hand portable tracking, monitoring and communications units for Satellite operation

CELLULAR

In-vehicle tracking, monitoring and communications units for GSM/GPRS operation

COVERT

Covert tracking, surveillance and counter surveillance equipment and systems

MONITOR

Advanced monitoring and reporting equipment for use in stationary applications

SOFTWARE

Enabling, mapping & presentation software and systems for Geonix Tracking products
