GPS IDENTICOM

What is the Covert Identicom?

The Covert GPS Identicom is a lone worker protection device in the form of an identity cardholder. It is worn by the user, is covert in its operation and allows the user to summon help in the event of an incident.

Using GSM mobile phone technology, Identicom allows the user to activate an open voice channel discretely. This one-way audio connection can be recorded and managed, assisting the delivery of an appropriate response to the call for help. This allows the wearer to feel more secure and less "alone", knowing that they can summon help at the touch of a button. Employers of these lone workers can also demonstrate their care and support of the workforce whilst at the same time addressing their legal duty of care.

What does it allow you to do?

- provide a personnel protection device to employees that is both covert (with its unique ID cardholder format) and within immediate reach
- allow the wearer to alert their support staff when they are entering an area of potential threat
- allow the wearer to request immediate assistance when required
- capture verbal abuse to staff
- receive an alarm automatically if an employee does not respond within a set time after entering an unknown or high risk location
- provide a cost effective lone worker protection solution for employees who work in dangerous environments or territories

Why buy a Covert Identicom for your lone workers?

- practicality: as an identity cardholder, the device is both covert and can be kept within immediate reach. All industry sized ID cards simply slide into the Identicom card holder
- alert modes: with the press of one button, a wearer can alert their support staff when they are entering an area of potential threat ("amber alerts") or signal for immediate assistance ("red alerts"). Red alerts can be automatically sent if a user does not respond within a set time
- voice channel: allows the wearer to brief the support staff on the situation, record information before entering an unknown area, allow support staff to listen in so that they can determine the nature of the threat, record any abuse or noises for later use as evidence

GT4000 Covert GPS Identicom

Package includes:

- Identicom badge with integrated tri-band GSM phone
- lanyard rip alarm
- 110-240v 50-60Hz charger
- 12 month warranty & manual
