

Overt and covert systems to locate, monitor and protect people and property worldwide

**GT6001**

**MONITOR**

**MONITORING SYSTEM**

### What is the GT6001?

The GT6001 is a flexible monitoring system that can be used in a wide variety of applications in GSM service areas. It allows users to monitor their assets via a variety of sensors and transmit the status to a central monitoring station.

The unit also features a two way voice capability, which allows direct communication between an operator at the centre and an operative in the field.

### What does it allow you to do?

- monitor continuously the performance of your remote system: such as pipelines, oil and water storage tank, navigational beacons, lighthouses, cellular base stations
- receive alerts when the monitored system requires attention, allowing you to take action before critical situations arise
- be notified of attempts to interfere with or cause damage to installations
- monitor unauthorised access attempts to sites
- provide additional safety & security for your employees and equipment

### Why buy a GT6001 for your monitoring solution?

- convenience: ability to monitor and control remote systems via the internet
- flexibility: ability to satisfy different customer needs through a range of functions and reports
- quality: the GT6001 uses Sony Ericsson GSM GR series modules guaranteeing the best performance and accurate data
- multi-functional: can monitor single or multiple sensors
- unique features: provision of voice communication between central and remote sites
- cost effective: one of the lowest cost monitoring systems available
- support & advice for your monitoring needs from a company that is a leading expert in tracking, monitoring & surveillance equipment

#### Package includes:

- wiring loom
- GSM antenna
- manual and software
- 12 month warranty

#### Key Features:

- real-time equipment status monitoring
- selectable event trigger report e.g. tank levels below minimum, batteries needing charging
- built in microphone
- built-in speaker with ability to broadcast voice to public
- programmable via pc with user-friendly software interface
- two way alert notification via SMS
- built-in backup battery in event power is cut
- advanced power saving technology – sleep mode, in-built motion detector

#### Requirements for end-to-end solution:

- SIM card from local GSM Service Provider
- Geonix Tracking Software
