

Overt and covert systems to locate, monitor and protect people and property worldwide

**GT8002/3**

**CELLULAR**

**IN-VEHICLE TRACKER WITH VOICE**

### What are the GT8002/3?

The GT8002/3 are in-vehicle tracking units that allow users to track and monitor their mobile assets in GSM service areas, and to make and receive hands-free voice calls. They use latest generation GPS systems to acquire their exact location and then transmit this and other relevant information to the customer's monitoring centre via the local GSM network.

The GT8002 has a two-button keypad, restricting outbound calling to a pre-determined number. The GT8003 has a twelve-button keypad which allows unrestricted calling.

GT8003 Cellular voice in-vehicle tracker

GT8002 Cellular voice in-vehicle tracker

### What does it allow you to do?

- keep continuous track of your mobile assets: trucks, cars, delivery vehicles, boats etc
- receive alerts when your asset leaves a pre-determined area or route, allowing you to take action before assets go missing
- be notified of attempts to interfere with or cause damage to cargo
- monitor and act on unauthorised use or non-compliance with speed limits
- make and receive handsfree voice calls
- provide additional safety and security for your employees and assets

### Why buy a GT8002/3 for your tracking solution?

- all the functionality of GT8000 plus handsfree voice calls
- convenience: position data sent by GPRS when available or by SMS when not. Position reports also stored in memory for later download
- quality: the GT8002/3 uses Sony Ericsson GPRS GR and SiRFllstar series modules guaranteeing the best performance and accurate data
- unique features: built-in sensor ports, 2 level alerting mechanism, navigational output – providing additional functionality for tracking and monitoring solutions
- cost effective: one of the lowest cost satellite tracking systems available
- support and advice for your tracking and monitoring needs from a company that is a leading expert in tracking, monitoring and surveillance equipment

#### Package includes:

- speaker
- microphone
- wiring loom
- GPRS antenna
- backup battery
- downloadable software

#### Key Features:

- real-time GPS tracking and vehicle status monitoring
- SiRFllstar GPS chipset
- GPRS and/or SMS transmission
- in-built memory for storing tracking data when GSM is not available and to facilitate passive tracking applications
- up to 5 circular geofence zones including 1 self geo-fencing zone
- ability to make and receive hands-free voice calls
- auto-answer functionality
- selectable reporting methods: by time, distance or intelligent
- selectable event trigger reports e.g. speeding, change of course
- 2 level alerting mechanism
- navigational output
- in built sensor ports to monitor and facilitate remote security responses

**CELLULAR**

**In-vehicle tracking, monitoring and communications units with extended capabilities operating on the GSM platform**

#### Requirements for end-to-end solution:

- SIM card from local GSM Service Provider
- enabling, presentation and mapping software
