

Overt and covert systems to locate, monitor and protect people and property worldwide

GT8018

CELLULAR

TRACTOR TRAILER TRACKER

What is the GT8018?

The GT8018 is a tractor-trailer tracking system that allows users to track and monitor their containers and rigs in GSM service areas.

It uses latest generation GPS systems to acquire its exact location and then transmits this and other relevant information to the customer's monitoring centre via the local GSM network.

What does it allow you to do?

- keep continuous track of your tractor trailer units, both when connected and separated
- receive alerts when your asset leaves a pre-determined area or route, allowing you to take action before assets go missing
- be notified of attempts to interfere with or cause damage to cargo
- monitor unauthorised use or non-compliance with speed limits
- provide safety & security for your goods even when stationary and unattached

Why buy a GT8018 for your tracking solution?

- built-in solar panel allows continuous monitoring of containers/trailer units when not attached to the tractor power source
- convenience: ability to monitor and control assets via the internet
- flexibility: ability to satisfy different customer needs through a range of alarm functions and reports
- quality: the GT8018 uses Sony Ericsson GPRS GR and SiRFIIIstar GPS series modules guaranteeing the best performance and accurate data
- unique features provide additional functionality for tracking & monitoring containers etc
- cost effective: one of the lowest cost tractor/trailer satellite tracking systems available
- support & advice for your tracking & monitoring needs from a company that is a leading expert in tracking, monitoring & surveillance equipment

Package includes:

- wiring loom
- GPS antenna
- manual
- 12 month warranty
- downloadable software

Key Features:

- SiRFIIIstar GPS chipset
- real-time GPS tracking & status monitoring for both connected and disconnected rigs
- up to 10 Geo-fence zones in circular or rectangular shapes, direct or remote set-up
- built-in solar panel allows continued tracking of containers even when untethered
- selectable reporting methods: by time, distance or intelligent reporting option
- selectable event trigger report e.g. speeding, change of course
- GPRS and/or SMS transmission
- history report mode – activity data can be downloaded at end of day or trip

Requirements for end-to-end solution:

- SIM card from local GSM Service Provider
- enabling, presentation & mapping software
